

FORENSIC EXPERT & CONSULTANT

(Questioned Document, Handwriting, Fingerprint Expert & Forensic Consultant)

Prof. (Dr.) Bhoopesh Kumar Sharma
(B.K Sharma Forensic Expert)

Qualified Expert in the Field of Fingerprints, Questioned Document, Handwriting, Forged & Disguised Samples Examination Bank Frauds, Consultation on Forensic Ballistics, Reconstruction of Crime Scene, Tips on Evidence in Courts & Cross Examinations.

Report No: 030425/70

Dated: 03/04/25.

(SUBMITTED FORENSIC EXPERT OPINIONS IN INDIAN AND MALAYSIAN COURT CASES- 19+ years of Experience)

- Professor, Forensic Science, SGT UNIVERSITY GURUGRAM (India)
- **Ph.D., M.Sc. (Forensic Science, Dr. Bhim Rao Ambedkar University, AGRA – Agra University)**
- Additional Qualification - Diploma in Forensic Science (AIBHAS, AUUP.)
- Additional Qualification – PG Diploma in Forensic Accounting (ICFAI, Tripura)
- Training in Questioned Document and Photography, RFSL, Dharamshala, (H.P.) Govt. of India
- Former Associate Professor & Program Leader, Forensic Science, Amity University Dubai (UAE)
- Former Assistant Professor & Program Leader Forensic Science, Amity University Uttar Pradesh, Noida
- Associate Member: American Academy of Forensic Science (AAFS - 48969), USA
- Life Member Forensic Science Development Society, Lucknow (INDIA)
- Life Member International Forensic Science, Pune (INDIA) Regd. With MCA, Govt. of India
- Associate Editor, Austin Journal of Criminology & Forensic Science, USA
- Presented and Published Several Research Papers in Various National & International Conferences, Seminars and Peer Reviewed Journals
- Research Excellence Award July 2022, by IIP Publishers, Institute of Scholars, Bengaluru, Karnataka, India
- Award for Innovative Research (18th December 2021), by International Education Awards, Delhi
- Best Researcher Award (29th May 2020), by Department of Forensic Science & Criminal Investigation, Legal Desire Media and Insights, India.
- Winner of “Best Indian Overseas Faculty Award” (2019) by GISR Foundation, India
- Winner of “Scientist of the Year Award” (2019) by Academy of Environment and Life Sciences, Agra (UP, India)
- Meritorious performance award for SAFCON 2008 and for Teaching Forensic Science at Amity University Uttar Pradesh.

Forensic Reports Submitted for Govt. and Non-Govt. Organizations Including: Sessional and High Court Cases, State Tax Office, Corporates, Insurance Companies, Public & Private Banks (State Bank of India, Central Bank of India, Corporation Bank, Punjab and Sindh Bank, Punjab National Bank), Jal Kal Vibhag, Veterinary Council of India, Indian Railways, Various Indian Police Stations, and many more.

**PRIMA FACIE REPORT ON THE FINDINGS DURING THE EXAMINATION OF TWO
PHOTOGRAPHS OF THE DECEASED (MS. DISHA SATISH SALIAN) AND THEIR
CORRABORATION WITH POST MORTEM REPORT OF MS. DISHA SATISH SALIAN (NAME AS
MENTIONED ON THE POST MORTEM REPORT)**

Report No: 030425/70

Dated: 03/04/25.

The material/secondary evidences (digitally sent photographs of the deceased and the copy of PM report) pertaining to Ms. Disha Satish Salian were provided to me by Mr. Satish Salian on 03.04.2025 for prima facie examination of the photographs of the deceased and the post-mortem report (Corroboration of Injuries and Findings written in the PM report) in this case, have been carefully and thoroughly examined.

Statement and Competency of the Forensic Expert: *It is for the kind reference of the Hon'ble Court and Respected Authorities that I, Dr. Bhoopesh Kumar Sharma is a Professor of Forensic Science and had been in the same profession (Teaching and Research in Forensic Science) for approximately 19+ years. I have been teaching the subjects like Questioned Document Examination, Handwriting & Signature Analysis, Forensic Photography, Crime Scene Investigation, Proactive Forensics, Forensic Fingerprinting, Forensic Medicine, and Ballistics etc. to UG and PG students, and have published several research articles of Forensic Science nationally and internationally in various reputed peer-reviewed journals. Beside this, I am also practicing as a Forensic Expert for Indian and Foreign Courts of Law. I have given my expert opinion in numerous cases of forgery, fraud, theft, fingerprint examination, fraudulent document examination, signature examination, handwriting examination, and many others in Hon'ble Court of Law since 2006. I have been summoned as an expert witness in several cases by Indian and Foreign Court of Law.*

In this particular case, though I am not a medical officer who has conducted the post mortem, nor I am entitled to do so, however, as a Professor of Forensic Science and as a Forensic Expert and Consultant, I considers myself competent to provide prima facie opinion for findings written in the post mortem report and their corroboration with the deceased photograph (visible parts).

It is to be noticed that this opinion is based on secondary evidences (photographs and copy of post mortem report) only. Further examination is required to confirm findings with the primary evidences and on the basis of the evidences lying with the I.O/Police Officers/Invetigating Agencies/Medical Examiners/ etc.

Subject: - The Expert Opinion regarding the Forensic findings in given secondary evidences evidences (photographs and copy of post mortem report) to identify corroboration between the two.

Description of Materials Provided: -

1. Photographs: Two digital photographs of the deceased Ms. Disha Satish Salian (name as mentioned on the PM report). The provided images are provided below in this report for further reference.

2. Post-Mortem Report of Ms. Disha Satish Salian titled as “Memorandum of a post-mortem examination held at BORIVALI PMC” on the body of – Disha Satish Salian. Report Id. Number: 167/SKJ/2020, ADR No 85/20/20, BODY No.439/78 MALVANI POLICE STATION.

Photograph 1: Picture of the deceased female wrapped in white cloth with visible face.

Photograph 2: Second Picture of the deceased female wrapped in white cloth with clearly visible face.

Note: None of the images has been further enhanced/morphed or modified by me or by my any associate during the examination.

FORENSIC FINDINGS (Characteristic Features Studied, Examined and Analyzed)

1. Analysis of Photograph No. 1:

Clearly Visible Right Eyebrow and eye orbit without any Injury or cut Marks

Partially Opened Eye

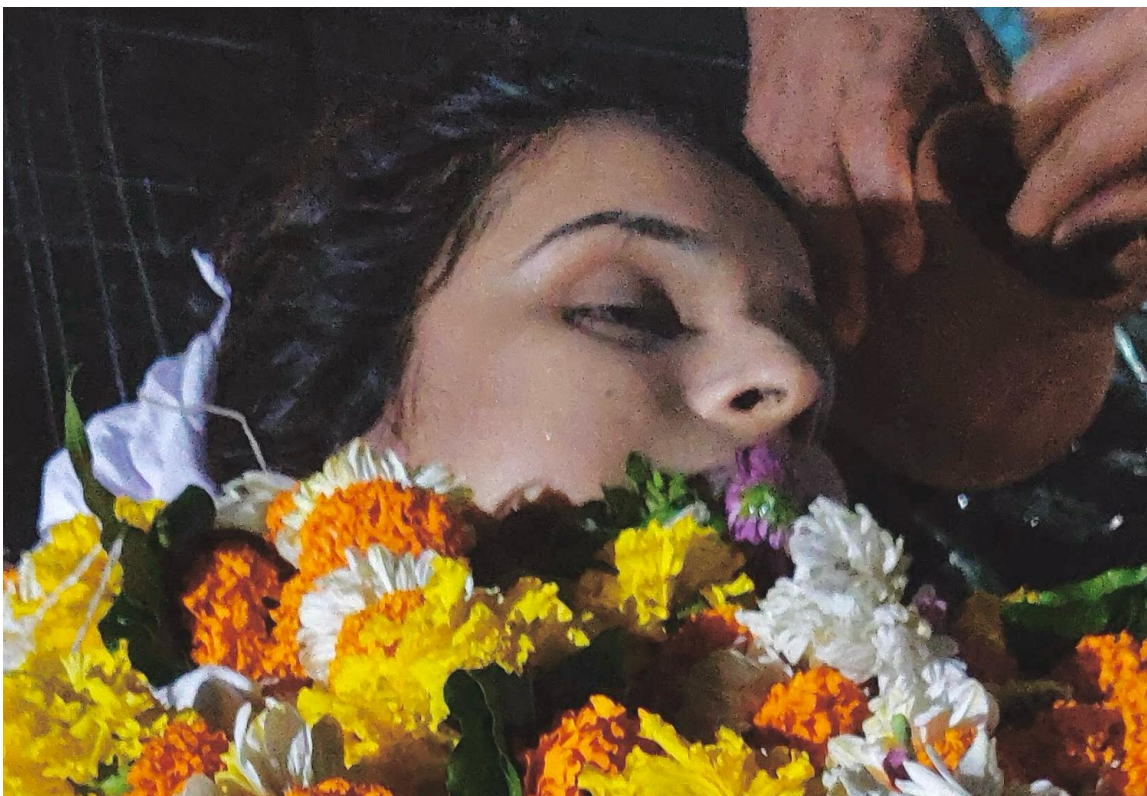

Clearly Visible Forehead without any Evidential Injury Marks

Clearly Visible Nasus (nasal region/external nose) without any Evidential Injury Marks or broken area.

Clearly Visible Right Cheek without any Evidential Injury Marks

***No sign of bleeding is present on the face in the picture 1.**

Enlarged Image

2. Analysis of Photograph No. 2:

Clearly Visible Right Eyebrow and eye orbit without any Injury (laceration, incision etc.) or cut Marks

Partially Opened Eye

Clearly Visible Right Cheek without any Evidential Injury Marks. However, slight swelling is visible.

Clearly Visible Forehead without any Evidential Injury Marks, cut marks, incision, laceration, etc.

Clearly Visible Nasus (nasal region/external nose) without any Evidential Injury Marks or broken area, or incision, laceration etc.

Clearly Visible Left Cheek without any Evidential Injury Marks. However, slight swelling is visible.

No sign of swelling or injury (abrasion or contusion) on upper lip

Visible Maxillary Frontal Teeth

***No sign of bleeding is present on the face in the picture 2.**

Enlarged Image

Forensic Finding in The Post-Mortem Report, those need further investigation and clarification of the doubts from Medical Examiner of the above case:

1. **Nude Body:** It is clearly mentioned in the PM report at point no. 7, that the body was found and/or received in “Nude” condition i.e. without any clothing. As a forensic expert in my opinion it could be because of either the person has allegedly committed suicide (so called) in the same condition (without clothing), or the person might have been sexually abused (if confirmed/remain un-confirmed during medical examination) and then thrown outside, Staged Suicide, Bathroom Accidents, mental distress or mental health disorders (if any evidence or past history of any psychotic episodes present), or due to threatened or forced fall.

In such conditions, findings/investigation of the clothing are very much required to rule out any suspicious activity. Clothings are always an important evidence to be analysed with their location, type, and condition in which they were encountered.

In present case it is suspicious that under what circumstances an individual will fall without any clothing.

2. **Point No. 13 of PM Report is about Features- Whether natural or swollen, State of Eyes, Position of Tongue, Nature of fluid (if any)oozing from mouth, nostrils or ears:**

- a. **The findings as per PM report:** Injured, eye, mouth semi closed

Forensic Opinion: This point is about the external examination of facial features and as stated in the PM report that face was found to be injured, whereas, no such external injury is evident in any of the pictures of the deceased provided and mentioned above by me. There must be clear signs of injuries on the pictures as mentioned in the report. Also, the PM report mentions “injured” in more generalized manner rather than providing specific details of type and position/location of injury on face. This type of contradiction in the photograph with PM report raises a concern that needed to be further clarified or investigated.

- b. **The findings as per PM report “Teeth seen Fallen (frontal)”**

Forensic Opinion: Despite the claim of broken frontal teeth, there are no visible external injuries as evident in the provided photographs. It is highly unlikely from a scientific and forensic standpoint that a person falling from the 13th - 14th floor would have only broken frontal teeth without any recognizable injury, bleeding, or trauma on the face as evident from the provided photographs . Here’s why:

1. Impact Force and Injury Distribution

- A fall from such a height generates massive impact force, usually leading to severe injuries to multiple body parts.
- The face is highly vascularized, meaning even minor trauma (like a broken tooth) would typically cause bleeding, abrasions, or fractures.

2. Frontal Tooth Injury Without Facial Trauma?

- If the frontal tooth (incisor) breaks, there must be a direct impact on the mouth or jaw.
- This would normally result in soft tissue damage (cuts, bruising, or swelling on the lips, gums, or inside the mouth).
- The absence of any external facial injury (as evident from provided photographs) suggests that there was no direct facial impact, making it hard to explain how only the tooth broke.

3. Possibility of Post-Mortem Manipulation

- If the teeth are broken without any facial injury, forensic experts would consider the possibility that the teeth damage occurred separately from the fall—perhaps post-mortem or due to another event.

Therefore, It is scientifically implausible that only frontal teeth would break while the entire face remains uninjured (as per pictures provided) and clear after falling from the 13th - 14th floor. This scenario would likely require further forensic investigation to determine if the injury occurred before or after the fall. Also, there must be a clear mention of specific tooth (or teeth) those have been fallen off like incisors or canines etc. Also, lips are not injured (abraded or bruised) after this great impact on the frontal teeth due to fall.

Final Conclusion: Based on a comprehensive assessment of the observations and findings from the examination of the provided photographs and the copy of post-mortem report of Ms. Disha Satish Salian, it is noted that, prima facie, the circumstances do not align with a death caused by a fall from the 14th floor. Additionally, discrepancies between the post-mortem report and the photographs of the deceased further raise serious concerns. Given these inconsistencies, a thorough re-investigation by the police or relevant authorities, with the assistance of qualified forensic experts, is imperative to uncover the truth.

**Note: No other forensic findings/opinion can be provided on the basis the provided photographs as no other external injuries/external body part/internal examination photographs are provided or no other area is visible in the photographs. This report is a corroborative report of the photographs provided and the findings mentioned in PM report.*
